_____ is the most common symptom found among adults aged over 65. It may not seem as serious as other life-threatening diseases. However, it often leads to physical and emotional stress. According to recent research, a simple music program can benefit older adults suffering from memory loss.

In this study, a group of adults over 60 were assigned a music listening program. They practiced 12 minutes every day for three months. The music therapy involved listening to music, dancing to music or creating music. Surprisingly, the participants showed significant improvements in their memory function. In addition, they reported improvements in their quality of life; better sleep and less stress.

The findings suggest that music might help older adults dig into their memories and exercise their brains. It could also help them relax and relieve stress. By doing a simple yet enjoyable activity, they can enrich their lives.

[27-28] 다음 글을 읽고 물음에 답하시오.

As my family sat in church last week, my brother did the most horrible thing. He farted. And let me tell you, he has the worst farts ever. Because we were in church, no one could run away from the smell. As it spread across the hall, row after row of churchgoers could barely breathe. It was so bad that my mom took him to the doctor the next day.

The doctor said that my brother's farts may be worse than most others'. That's because of the kind of bacteria in his stomach. No one's farts smell flowery, but extremely smelly farts can be a sign of health problems. The doctor said he should change his diet. If he eats more vegetables and drinks fewer sodas, his fart might become less smelly. I'm crossing my fingers that the doctor is right because we have church again tomorrow.

An average human heart beats about 100,000 times and pumps about 7,200 liters of blood every day. It is important to keep our heart healthy by doing regular exercise. Recently, the Heart and Stroke Foundation in Canada has introduced a program called Jump Rope for Heart. This exercise program helps kids exercise on a regular basis.

The program is specifically encouraging children to do jump rope in their daily lives to prevent heart disease. Doing jump rope during breaks, lunch, and P.E. classes can help kids reach the recommended daily hour of exercise. It also allows kids to raise the money for the American Heart Association. The money goes to support other kids with heart health issues. The program not only helps kids become healthier but also teaches them the value of helping others. Plus, by becoming healthier, kids can help their parents save their money on medical bills.

There are certainly many benefits to the Jump Rope for Heart program. Why don't you get a jump rope and participate in leading a healthier life?

29. 위 글의 목적으로 가장 적절한 것을 고르시오.

[31-32] 다음 글을 읽고 물음에 답하십시오.

Yawning is one of the most common, yet mysterious, behaviors found in nature. Yawning is also contagious. Are you yawning as you read this? Seeing someone else yawn, or even just reading about it, will often make people yawn. But why do we yawn?

(A) For a long time, it was thought that people yawned to get more oxygen into their bodies. But researchers found no connection between oxygen levels in the blood and yawning. Recently, scientists have developed another theory. According to this new theory, yawning is related to brain temperature.

(B) Despite these theories, there isn't enough evidence to support any of them. Yawning definitely seems to be a signal to our body. However, scientists haven't yet been able to understand this signal.

(C) The cool air you breathe in when yawning may cool your brain. Scientists found that we usually yawn when our brain gets the warmest. Often, this is right before we go to bed and right after we wake up. By yawning, we cool our brain and keep our head clear.

31. (A)~(C)를 글의 흐름에 맞게 알맞게 배열한 것을 고르시오.

- ① (A)-(C)-(B)
- ② (B)-(A)-(C)
- ③ (B)-(C)-(A)

There is a remarkable city being built. Its completion is on the horizon, and it may lead to a new era of city planning. It's named Masdar City, and it may enable a future that many thought impossible.

Masdar City is a new planned city being built just outside Abu Dhabi in the United Arab Emirates (UAE). The city, which was planned in 2005, is intended to be the world's first zero-carbon city. Even in the middle of the extremely hot UAE, the city streets stay at a cool 20 - 25°C thanks to its smart construction. The city is built slightly above the ground and shielded by high walls, which cools the air. Additionally, buildings are placed close together, creating shade. Meanwhile, funnel-like structures create a breeze, keeping the city cool.

In an effort to build a sustainable city, the entire city is powered by 87,777 solar panels, and lights are controlled by motion sensors, reducing energy consumption. In addition, there are no gasoline-powered cars; only self-driving electric vehicles are allowed in the city.

Masdar City already houses around 5,000 people and should be completed by 2025. But the "clean" ideas of Masdar City may spread sooner. Hopefully, everyone around the globe will eventually enjoy a sustainable lifestyle.

[35-36] 다음 글을 읽고 물음에 답하시오.

All of us can speak at least one language. You are lucky if you can speak more than one because benefits of bilingualism are becoming clear. Linguists have found out that learning a second language increases the size of some areas of the brain. This may help bilinguals develop better cognitive abilities than those who only know one language.

According to Swedish linguists, learning foreign languages has a positive effect: _____. Researchers studied a group of young soldiers, asking them

to study another language intensely. The researchers used MRI scans to observe the size of the subjects' brain. They compared the results to those of another group of soldiers who had studied other subjects. The researchers found significant brain growth in the group that had studied a foreign language. In contrast, there was no change in the brain size of those who had studied other subjects. Therefore, scientists attributed the change in size to studying a second language.

Learning a second language affects the brain in many ways. This is because switching between languages is like giving the brain a workout. By becoming bilingual, our brain is unknowingly exercising to improve!

35. 위 제목으로 가장 적절한 것은?

- ① How to Learn a Second Language
- ② The Benefits of Speaking Multiple Languages
- ③ How to Grow Your Brain with Language Learning
- ④ The Positive Effect of Bilingualism on the Size of the Brain
- ⑤ The Correlation Between the Number of Subjects Studied and Its Effect on the Brain

36. 위 글의 빈칸에 들어갈 말로 가장 적절한 것은?

- ① improving language scores
- ② making your brain exhausted
- ③ decreasing brain development
- ④ increasing the size of the brain
- ⑤ developing critical thinking skills

37. 다음 제목으로 가장 적절한 것은?

In the late 1960s, a television producer, Joan Cooney, started an epidemic. She targeted children between three and five. Her agent of infection was television and the “virus” she wanted to spread was literacy. The show would be an hour long and run 5 days a week in hopes that it would become contagious enough to improve education. Her aim was to spread positive learning values to all children and even their parents. She also intended for it to give advantages to children with fewer opportunities once they began elementary school. What she wanted to do, in essence, was create a learning epidemic to fight the widespread epidemics of poverty and illiteracy. She called her idea *Sesame Street*.

*epidemic: 전염병

- ① Sesame Street: Educational Virus
- ② Are Children Sick of *Sesame Street*?
- ③ What Makes *Sesame Street* Harmful?
- ④ Too Much TV Time Equals Less Education
- ⑤ Don't Turn on TV Too Early in the Morning!

38. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

Pets make great companions, and it has been widely accepted that living with them brings multiple health benefits. Many researchers have found that pets can help lower blood pressure and relieve stress. Some even argue that pet owners age slower due to the various physical and psychological benefits of having a pet. However, a recent study shows that owning a pet does not seem to positively influence psychological health, nor does it slow down the aging process. Instead, the researchers pointed out that pet owners have the same physical and psychological health levels as non-pet owners. They concluded there was no evidence of a strong link between living with a pet and different health factors like lung function, muscle strength, balance, blood pressure, or depression.

According to a study, ____ (A) ____ of a pet does not necessarily have ____ (B) ____ impacts on human health.

- | (A) | (B) |
|--------------|----------|
| ① ownership | damaging |
| ② ownership | positive |
| ③ friendship | lasting |
| ④ friendship | negative |
| ⑤ presence | limited |

39. 다음 글의 제목으로 가장 적절한 것은?

One might wonder whether there is any reason to be concerned about overconfidence in students. After all, confidence is often considered a positive trait. Indeed, research suggests that students who are confident about their ability to succeed in school tend to perform better on academic tests than those with less confidence. That said, negative consequences also stem from being too confident in the classroom. Students who are overconfident about their ability to succeed in college end up feeling more disconnected and disillusioned than those with more modest expectations. Overconfidence can also leave students with mistaken impressions that they are fully prepared for tests and no longer need to study. Students who have relatively accurate perceptions regarding their progress in learning tend to use more effective study habits and perform better on tests than do those with more error-prone views of their knowledge.

- ① 학생의 지나친 자신감이 학교 생활에 미치는 부정적 영향

- ⑤ 나쁜 공부 습관을 바꾸는 효율적인 방법

40. 다음 글의 주제로 가장 적절한 것은?

The rapid growth of bacteria immune to antibiotics is occurring worldwide. The modern era of antibiotics started with the discovery of penicillin by Sir Alexander Fleming in 1928. Penicillin was first used successfully in the 1940s to control bacteria-based illnesses during World War II. Since then, antibiotics have continued to save millions of lives. Unfortunately, bacteria can become immune to the antibiotics that they encounter. Many decades after the first patients were treated with antibiotics, infections have again become a serious threat. This crisis can be attributed to the excessive use and misuse of these medications. To help stop the problem, people should only take antibiotics when they absolutely need to.

*antibiotics 항생제

penicillin 페니실린(항생 물질의 하나)

- ① how antibiotics fight illnesses
- ② the development of antibiotics
- ③ how to keep antibiotics more powerful
- ④ the decreasing effectiveness of antibiotics
- ⑤ the need for finding safe alternatives to antibiotics
